

Installation Guidelines & Requirements

Before purchasing installation for your chosen Play Centre, please consider these below points from our trusted Installers:

Firstly, the ground needs to be flat and all cleared with no obstacles, we don't require bowling green flat but we cannot build the climbing frame of your choice on hills and humps, bumps and slopes.

Please see images below

The climbing frame timber does not go into the ground only the ground anchors, if we were to start putting the climbing frame in the ground you would lose the height of your platform therefore the slide would not fit properly.

The climbing frame can be put directly onto grass, if putting chippings and weed barrier this will need to be done first / wet pour can also go down before the climbing frame / artificial grass can also go down before climbing along with sand.

Please note if the installers arrive to your property and the ground is not ready, or does not meet the above ground requirements installation will be refused and you may be liable for the costs incurred if a revisit is needed.

If you are still unsure, please contact: customercare@costco.co.uk who can forward your queries onto our installers.
