

PREPARING FOR YOUR DOOR INSTALLATION

This preparation guide gives you the information needed to ensure that your Aluminium Dortech Front Door is installed in a timely but safe and tidy environment. Please read this guide carefully and adhere to each section.

Access to Property

Installers will need a clear and safe route from their vehicle to the point of installation.

Clear all debris and tripping hazards from their pathway to ensure safe delivery.

Alarm Points

Our installers are not trained electricians and therefore the removal and reinstatement of alarm points, or electrical points must be undertaken by others. Any alarm points located on, or around the existing door and frame must be removed/disengaged prior to our engineers commencing work.

Working Area

To install a Dortech Door, a clear working area all around the opening is needed.

Remove any large or small items within the proposed working area.

Electricity

Our expert installer may require access to a standard plug for the use of their tools.
